

PAULDING COUNTY WATER SYSTEM

Average Residential Water Usage

Data taken from northgeorgiawater.org

Have you ever wondered how much water your household uses and where it's going? One of the easiest ways to check how much water a shower, a car wash, a play in the sprinklers, or any other specific activity uses is to take before and after readings from your water meter. Ask a Customer Service Representative if you need help in how to read your meter. A few easy ways to help conserve your water usage-and lower your bill- are to turn the faucet off when not in use, such as brushing your teeth; taking shorter showers (every minute helps!); and only using the dishwasher or washing machine when you have full loads.

****Ask a Customer Service Representative for your own Water Savings Kit to take home today and help your family conserve water****
